Project Profile

Sector: Contaminated Land

Project: Training on Human Health Risk Assessment

Client: Midland Joint Advisory Council for Environmental Protection

Period: July 2000

The Midland Joint Advisory Council for Environmental Protection (MJAC) is a regional pollution control group for Local Authorities working in the Midlands region.

The MJAC commissioned LQM to provide a one day bespoke training course on human health risk assessment for approximately 25 delegates all of who were Local Authority staff. Members of the MJAC assisted in developing the training programme which was aimed at providing an overview of the processes involved in undertaking human health risk assessments for contaminated land.

The day comprised of

- An overview of the risk assessment process
- The input requirements for a site specific risk assessment
- An overview of the exposure pathways in relation to human health
- An outline of the risk assessment tools currently available
