

LQM
LQM

Project Profile

Sector: Resource Management, Fisheries
Project: Training on the use of geostatistics for use in Fisheries Management
Client: CEFAS
Period: November 2000

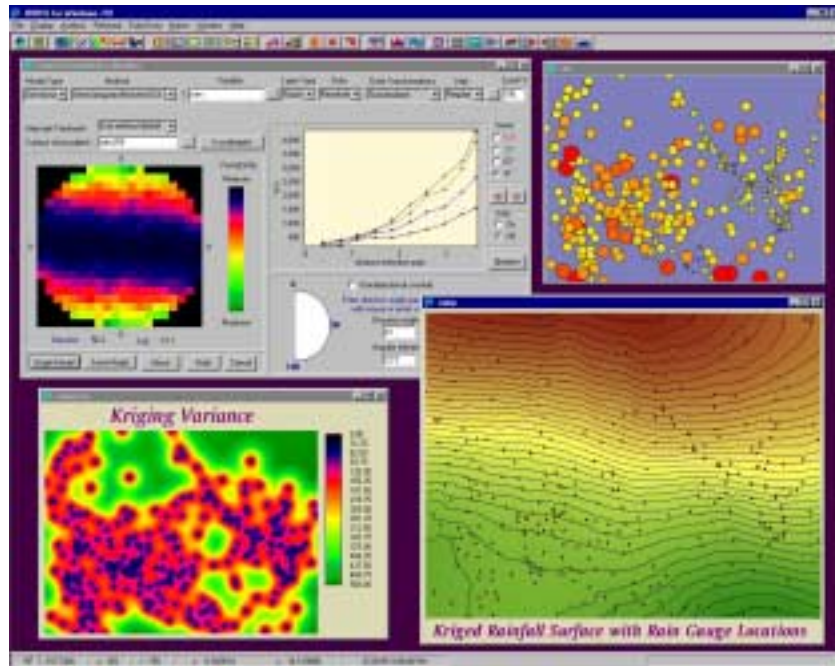

Image: IDRISI outputs

The Centre for environment, fisheries and aquaculture is seeking to utilise new methods of spatial analysis for their marine data. LQM was asked to train a group of marine scientists in the use of Geostatistics for spatial interpolation using IDRISI 32 software. Training took place over the course of two days at the client's site in Lowesoft. Training entailed:

- Fundamental principles of geostatistics
- Data Exploration
- Structural Analysis
- Variogram Modelling
- Spatial Interpolation
- Geostatistics in IDRISI 32
