LQM

Project Profile

Sector: Landfill Gas
Project: Landfill Gas Odour and Gas Management
Client: Confidential client and site
Period: 2001

LQM were invited to perform an audit of the landfill to ascertain point and area sources of odour and to agree a programme of remedial works with the Environment Agency to manage landfill gas emissions from the operational phases of the site.

This work included an audit of the operations against site licence conditions and resulted in positive actions which could be taken out to ensure that surface emissions were managed effectively and point sources of emissions were addressed. LQM also suggested that the method of logging odour complaints was tightened up in order to allow proper evaluation of the alleged odour impact of the landfill.
